PMF Simulation Report

A transit-oriented apartment community with flexible units, shared workspaces, and family services.

FIT SIGNAL	73 / 100
Research question	Which amenities and lease design create enough value to support premium rents?

Signal overview

Executive recommendation

Test demand with transparent all-in pricing and three amenity bundles. Prioritize quiet work rooms, mobility infrastructure, safety, and functional family layouts.

Segment response

SEGMENT	SIGNAL	WHAT WE HEARD
Professionals	Strong pull	Transit, secure bike storage, and bookable quiet rooms improve monthly value.
Families and downsizers	Conditional	Storage, acoustics, guest space, and dependable services matter more than spectacle.
Budget renters	At risk	Mandatory amenity and surprise monthly fees undermine trust before a tour.

Leading objections

1. Total monthly cost and mandatory amenity fees
2. Family storage, acoustics, and dependable childcare
3. Late-night transit safety and building access controls

Representative thoughts

"Train access plus secure bike storage would let me drop a car payment."

"Publish the complete monthly cost before I tour."

"Ground-floor local retail makes the place feel like a neighborhood."

Recommended validation plan

Test demand with transparent all-in pricing and three amenity bundles. Prioritize quiet work rooms, mobility infrastructure, safety, and functional family layouts.

Next study

Run a focused concept test with real target users. Preserve the same segment definitions, test the leading objections directly, and compare observed behavior against stated pilot or purchase intent.

Methodology and limitations

Nine representative personas evaluated the concept across five simulated rounds. The analysis summarizes their stated priorities, objections, and pilot or purchase intent. These directional findings should be validated through primary customer research before making investment decisions.

Snorkel converts customer context into simulated reactions, comparable signals, and meeting-ready product decisions.
